19 January

in details

Jacob: implementation of mycokey character set (and genus level data) in Unite

Håvard: Making a joint fungal trait database (within the framework of UNITE). Our network could, through jamborees, etc., start fill the "UNITE trait module" with characters - this could be a joint activity leading also to a joint publication. In this first publication we could present some prelim meta-analyses of the traits (also coupled to SH and sequence clusters). Urmas seemed positive about such an initiative (right?). As you know, Jacob has also been much involved in these discussions.

Inga: Funding opportunities within
